

## SHAKING TABLE

# Holman 8000

The Holman 8000 Shaking Table replaces the Full Size Holman Shaking Table and includes new features which make the machine even more user friendly.

# Holman-Wilfley

### Key Features

- Unit is driven by a Holman head motion with a stroke adjustment of between 10mm and 16mm (nominal).
- Head motion is self-lubricating. Simple, robust design requiring minimal maintenance.
- Deck is supported on 42 carriers and is vibrated diagonally along the entire length.
- Decks are made from good quality timber with standard smooth rubber covers for maximum durability. Other covers are available on request.
- Different riffle patterns can be supplied to maximise metallurgical performance.
- Table tilt can be easily adjusted using a hand wheel, even while the machine is in operation.
- Choice of concrete plinth or steel base mountings.
- Unit comes complete with direct, on-line starter.
- Double deck units are available where floor space is limited.

### Typical Applications

- Recovery of precious metals from low tonnage streams.
- Recovery of cassiterite and tantalite/columbite from ores.
- Recovery of other heavy minerals or materials.
- Recovery of any difficult to treat fine particle size heavy material.
